RE: Docket No. 07-16

Dear Madam Secretary:

As a teacher, I believe no child should be left behind because existing broadband options are not affordable. Passage of Docket No. 07-16 would make broadband fast and free to the majority of Americans.

According to Pew Internet Report, at least 79 percent of college students rely on the Internet. At Apex Language Center, we teach English, Spanish, Polish, Hebrew, Russian, Italian, French and Latin. Our students rely on our website for the latest class offerings and registration.

If a student's only access to high speed Internet is at school, it will greatly limit their participation in on-line study groups, research and their ability to do homework.

Currently, the U.S. is ranked behind Estonia in terms of it's broadband penetration. That is not acceptable. The M2Z proposal would make the U.S. a leader in broadband penetration. Please support Docket No. 07-16.

Sincerely,

A handwritten signature in cursive script, appearing to read "Kathy G. Gutierrez".

RE: Docket No. 07-16

Madame Secretary,

As an educator, I am writing you in support of Docket No. 07-16. Fast, free broadband service would help TICH's mission to teach students about their Latin heritage and culture. TICH is the acronym in Spanish for Hispanic American Intercultural Workshop, located in Tampa, Florida. We serve five dozen students per semester.

In a 2001 book about children of foreign-born parents - approximately 20 percent of American youth - the co-directors of the Harvard Immigration Project said that learning to be bicultural and function well in both worlds gives the child a better chance for success. Those who don't are more at risk of dropping out of school or joining gangs. And even if they become socially successful, they are more likely to alienate their families.

At the same time, The National Center for Education found only 52% of Latino students rate their education as positive while even less have access to the Internet.

Please pass Docket No. 07-16 and level the playing field on education for all students.

Regards,

Maria Esther Carrillo

RE: Docket No. 07-16

Dear Madam Secretary:

As the executive director of Centro Asturiano de Tampa, I am interested in the proposal by M2Z Networks to create a free broadband network throughout the nation.

We provide cultural programs as well as business networking opportunities to this area's large Hispanic community. A free broadband network would assist in distance-learning opportunities, become another tool for job networking, and assist emergency responders in case of dangerous weather.

A free broadband internet connection, provided by a third party, would help our citizens achieve the American Dream, something that Centro Asturiano has worked to accomplish since 1902 for it's members.

Don't allow our great nation to fall behind in this technological revolution. I urge you to approve the M2Z Networks proposal.

Sincerely,

A handwritten signature in black ink, appearing to read 'Al Frederick', with a large, sweeping flourish extending from the end of the signature.

Re: Docket Item #07-16

Dear Secretary Dortch:

It is my understanding a proposal that would create a universal wireless Internet access capability throughout the country is now before the Federal Communications Commission.

As the president of the **Asian American Forum** in North Texas, I have worked to promote education, political and economic opportunities for Asian Americans and their families. I hope the FCC will give serious consideration to how we can provide easier and more affordable access to the Internet for all Americans. We are far behind other countries in making access to the Internet easier.

This has implications for us as a nation. With only 41 percent of students from households that make less than \$20,000 using the Internet we are seeing an increasing digital divide in this country between those with access and those without access to the Internet. This impacts our educational system. And, although small businesses make up 99 percent of all businesses in the United States, only 5.4 million small and SOHO business have broadband connections impacting their ability to compete in a worldwide economy.

The proposal now before the FCC that would enhance access to Internet, from M2Z Networks, deserves consideration by the FCC. Much like the television networks were granted bandwidth to establish a national television network, granting bandwidth for a national internet connection capability is an idea worth exploring. I hope you give this proposal your serious consideration along with other proposals that will make the Internet more accessible to all across our country.

Sincerely,

Phillip Shinoda
